

InterOp.Community is an emerging collaboration to advance healthcare interoperability through open platforms and open-source software. With a common goal of improving interoperability across the health care industry, InterOp.Community serves as a technology incubator and open source meritocracy that offers a comprehensive community and environment for the exchange, integration, and sharing for the common components found in modern electronic health information systems that supports clinical practice, data management, health information networks, evaluation and financial processes.

Engage

Engage in a dynamic virtual environment with a variety of health sector entities including, Health Information Exchanges (HIEs), startup companies, public, private, and academic institutions, and standards organizations.

Connect with a dynamic community working on interoperability solutions that address fundamental health sector challenges.

Inspire global entities to support community efforts and provide opportunities within global healthcare.

Collaborate freely in open-source projects with other high-impact organizations to accelerate industry solutions.

Access

Utilize open-source tools to develop innovative solutions.

Employ a variety of business process models and their associated use cases supported by our communities of practice.

Utilize InterOp.Community synthetic data resources and gain early access to new and expanded features as they roll out.

“Fail forward” with entirely synthetic data. Experiment and discover with no risk of PHI exposure.

“Universal adoption of healthcare IT standards and protocols is key to realizing true interoperability. The InterOp.Community sandbox is a unique environment that allows implementers to test their solutions against large datasets and shorten the development/testing lifecycle.”

-Ron Shapiro, VP and CTO for Qvera

“We, collectively, are committed to transforming healthcare through the advancement of interoperability.”

-Joyce Sensmeier, MS, RN-BC, FHIMSS, FAAN, Senior Advisor of Informatics at the Healthcare Information and Management Systems Society (HIMSS) and IHE USA President

InterOp.Community is a unique sandbox, built for global healthcare innovators to converge and solve some of the toughest challenges facing providers, payers, and patients.

-Ben Cushing, Chief Technology Officer for Federal Health at Red Hat
